
Engaged Developer

I am a trained software developer, looking for my future workplace where I can both contribute and grow professionally. I enjoy turning ideas into solutions that create real value. I am an engaged team player with strong communication skills and a great eagerness to develop myself - both within software development and in collaboration with colleagues and users.

Education

08/2022 - 09/2025 **IT University/** BSc. Software Development Copenhagen

Throughout my bachelor's degree, I have gained experience in developing software under highly realistic conditions. Many projects, in collaboration with organizations such as the Danish Business Authority, Mastercard, and the NGO *Junkfood*, have provided me with a solid understanding and broad experience with various technologies, frameworks, and programming languages.

I am capable of working with existing systems and developing them further from a given point, while also being able to design and realize new software systems. Together with Mastercard, my team and I designed and developed two applications for the NGO Junkfood, which prepares meals for the homeless. The client-application is now available in the App Store. In this project, we worked intensively with the agile framework, which highlighted many of its advantages. It also gave me valuable insight into working with multiple stakeholders and a broader project perspective.

My competencies include:

- Database management
- App development
- Version control
- Agile collaboration, Scrum
- Security and risk assessments
- Deployment & CI/CD
- Basic knowledge of Azure
- AI-models
- Blockchain

08/2018 - 07/2021 **HTX Roskilde/** Upper Secondary Education Roskilde

During my upper secondary education, I received general academic teaching, but I knew early on that I was interested in programming. Therefore, I chose a study track with programming, which gave me the opportunity to explore it through smaller projects. This provided me with a strong foundation for further learning.

Work Experience

01/2023 - 09/2025	The Danish Parliamentary Ombudsman/ IT Student	Copenhagen
	- Develop and containerize internal tool (React, Spring Boot, Docker) including version control and database design - Configure and monitor systems in Zabbix; completed training as certified Zabbix Specialist - Administered users and devices in Active Directory - Optimize and configure network infrastructure - Daily IT support for end users	
01/2022 - 01/2023	Fire Eater/ Production Worker	Hillerød
07/2021 - 01/2022	Pipers Hus/ Server	Roskilde

Competencies

C#		MySQL	
Java		Postgres	
Python		Supabase	
React		SQLite	
C / Assembly		Azure	
Scrum		Github	

A Little About Myself

In my free time, I enjoy strength training and am working towards the goal of bench pressing 100 kg. I also like reading books on personal development and am currently diving into *Thinking, Fast and Slow* by Daniel Kahneman. In addition, I enjoy playing guitar, experimenting with coffee, and spending time with friends - often around good food and social activities. I am also looking forward to an upcoming ski trip with my group of friends.
